

Application No. 10/723723
Response to Office Action of July 17, 2008

Atty. Docket No. 6570P007
Examiner MURDOUGH, Joshua A.

Amendment to the Specification:

Please replace paragraph [00013] with the following amended paragraph:

'[00013] Reference numeral 145 indicates that a plurality of client systems 115 may request the services of server system 120. Since server system 120 may provide secure electronic record services to several clients, the implementer of server system 120 may make much larger investments in server system 120, particularly with regards to security, than any individual client could make. In an embodiment, server system 120 may provide a number of security mechanisms including: authentication, digital signatures, encryption, authorization, unique record numbers, access control for fields and areas of the generated electronic records, and/or "faceless receipts." Authentication service 122 and Identity Generator Service 124 are shown as one exemplary combination of security mechanisms which service system 120 may provide in one embodiment. These security mechanisms, including "faceless receipts," are further discussed below.'
